

Foodos

60-Day Delivery Plan | 2-Person Team

Team Structure

Role	Owner	Responsibility
Developer 1	Frontend Lead	All 4 UI portals (Customer, Delivery Partner, Restaurant Partner, Admin)
Developer 2	Backend Lead	
Shared	Both	Testing, Integration, Deployment

Phase-Wise Breakdown

Phase 1 — Foundation (Day 1-10)	
Frontend	Customer App: Splash, Login/OTP, Home (already done) then Restaurant, Food Detail, Cart screens
Backend	Project setup, database schema, Auth Service (OTP + JWT), core APIs skeleton
Milestone	Customer app browsing flow + login working end-to-end

Phase 2 — Customer App Complete (Day 11-20)	
Frontend	Payment Screen, Order Tracking, Profile Screen
Backend	Order APIs, Payment gateway integration (Razorpay), Wallet & Coupons
Milestone	Customer can browse, order, pay and track (with test data)

Phase 3 — Partner Apps (Day 21-35)	
Frontend	Delivery Partner App (all screens) + Restaurant Partner App (all screens)
Backend	Delivery assignment logic, live location (WebSocket), Restaurant order APIs, menu management
Milestone	Order flows end-to-end across Customer, Restaurant and Delivery Partner

Phase 4 — Admin Dashboard (Day 36-45)	
Frontend	Full Admin Dashboard (orders, restaurants, partners, analytics, payments, offers, support)
Backend	Admin APIs, analytics aggregation, settlement/payout logic, notifications (Push/SMS)
Milestone	Admin has full visibility and control over the platform

Phase 5 — Integration + Testing (Day 46-53)

Both	Connect all 4 apps to live backend, fix integration bugs
Testing	API testing, critical flow E2E testing (order, payment, delivery), payment sandbox testing, load testing
Milestone	Stable build with no critical bugs

Phase 6 — Deployment + Launch Prep (Day 54-60)

DevOps	Docker + CI/CD, staging to production deployment, SSL, monitoring setup
Both	Final UAT, bug fixes, app store / play store submission prep
Milestone	Live production-ready platform

Effort Distribution Summary

Phase	Days	Focus
1. Foundation	10	Auth + Customer app start
2. Customer App	10	Payments + tracking
3. Partner Apps	15	Delivery + Restaurant apps
4. Admin Dashboard	10	Full admin panel
5. Testing	8	Integration + QA
6. Deployment	7	Go-live
Total	60	

What Gets Delivered by Day 60

- Customer App (iOS/Android-ready web build)
- Delivery Partner App
- Restaurant Partner App
- Admin Dashboard (web)
- Backend APIs: Auth, Orders, Payments, Real-time tracking, Notifications
- Tested, deployed on production infrastructure with monitoring

Key Risks

Risk	Mitigation
Payment gateway KYC delay	Start Razorpay account setup on Day 1
Real-time tracking complexity	Backend dev prioritizes this in Phase 3, buffer built in
2-person bandwidth	Scope locked to brochure features only, no scope creep during the 60 days

Cost & Tooling

Third-Party Services, Infrastructure & Dev Tooling

1. Payments

Service	Purpose	Cost
Razorpay	UPI, Card, Wallet, COD reconciliation	No setup fee. ~2% per transaction
Razorpay Payouts	Restaurant / rider settlements	~Rs.2-5 per payout

2. SMS / OTP Gateway

Service	Purpose	Cost
MSG91 / Twilio	OTP login (Splash to Login flow)	~Rs.0.15-0.25 per SMS
Estimated volume	10,000 signups/month (2 OTPs each)	Rs.3,000-5,000/month

3. Maps & Location

Service	Purpose	Cost
Google Maps Platform	Live tracking, navigation, ETA (rider app)	\$200 free credit/month, then pay-as-you-go
Estimated usage	5,000 orders/month	\$50-150/month (Rs.4,000-12,000)

4. Push Notifications

Service	Purpose	Cost
Firebase Cloud Messaging	Order status push (all 3 apps)	Free (unlimited)

5. File Storage

Service	Purpose	Cost
AWS S3 / Cloudinary	Menu & restaurant image uploads	Free tier, then Rs.500-3,000/month

6. Database

Service	Purpose	Cost
PostgreSQL (Supabase/Railway)	Orders, users, menu, payments	Free tier, Pro from \$25/month
Redis (Upstash)	Cart sessions, live rider location cache	Free tier, then \$10-20/month

7. Hosting

Service	Purpose	Cost
Backend API hosting	Node.js APIs, WebSocket server	\$7-25/month per service
Frontend hosting (Admin panel)	Static hosting	Free tier, Pro \$20/month if needed

8. Domain & SSL

Service	Purpose	Cost
Domain (e.g. foodos.in)	Brand domain	Rs.800-1,200/year
SSL Certificate	HTTPS encryption	Free (Lets Encrypt)

9. App Store / Play Store

Service	Purpose	Cost
Google Play Console	One-time registration	\$25 one-time (~Rs.2,100)
Apple Developer Program	Yearly membership	\$99/year (~Rs.8,300/year)

10. Monitoring

Service	Purpose	Cost
Sentry	Error tracking (backend + frontend)	Free tier, Team plan \$26/month
UptimeRobot	Server uptime monitoring	Free

11. AI Coding Tools

Service	Purpose	Cost
Claude Standard Subscription	Agentic coding, backend logic, refactors for 200 lines	\$20/user/month -> 2 devs = \$40/month (~Rs.3,400)

Total Monthly Cost Estimate (Post-Launch, Moderate Scale)

Category	Monthly (INR)
Payments (Razorpay)	Transaction-based (2% of GMV)
SMS / OTP	Rs.3,000-5,000
Maps	Rs.4,000-12,000
Storage	Rs.500-3,000
Database	Rs.2,000-4,000
Hosting	Rs.3,000-6,000
Monitoring	Rs.0-2,200
AI Coding Tools (Claude Standard x2)	Rs.3,400
Total (excl. Razorpay %)	Rs.15,900-32,600/month

During the 60-day build phase, only the Claude Standard subscription and basic dev hosting (~Rs.10,000-13,000/month total) are needed. Maps, SMS and Razorpay costs only apply once real usage or sandbox testing begins (mostly free in test mode). Razorpay fees scale with revenue, not a fixed monthly

cost.
